### **Click2Enter, Inc., is Proud to Announce the Following:**

## **CLICK2ENTER SELECTED AS SECURITY SALES & INTEGRATION MAGAZINE TOP 30 CUTTING EDGE PRODUCTS AT ISC WEST '04**

**Sonoma, California, Tuesday, June 22, 2004** - Click2Enter, Inc. (C2E) of Sonoma, CA, manufacturer of emergency access controls for gates, bollards, parking-arm controls and roll-up doors has been selected as one of the "Top 30 Cutting-Edge Products" at the April, 2004 International Security Conference (ISC) West in Las Vegas. The selection was made by Security Sales & Integration (SSI) magazine, a leading industry trade publication, from among 730 exhibitors at the show.

SSI columnists Al Colombo and Bob Dolph selected the products security contractors "could benefit from the most..." Their choices included systems from manufacturers as large as Honeywell and Bosch and smaller companies like C2E.

"One of our big challenges is winning recognition by security contractors and potential users," said C2E President and founder Pete Sutsos, the product's inventor. "Being singled out by a top industry trade magazine is definitely a big boost and an honor for us."

With a diverse array of access security technologies now in use worldwide, emergency responders commonly have to carry numerous remote controls, keys and control code lists in their vehicles. Using a key or entering a control code can also delay their response time. The common technology that ties all emergency response agencies together is their radio system.

The Click2Enter-I is a programmable multi-user device, enabling police, fire and public safety personnel to open gates and other security devices using their own mobile or portable radios. The C2E unit will only respond to those tightly controlled frequencies programmed into it. The C2E provides emergency response personnel improved response times, immediate, stealthy, secure, and universal access.

Up to fifty different agencies can be given access to one Click2Enter-I device. Each Click2Enter-I can operate within the entire spectrum of available frequencies typically allocated to public safety agencies. For public safety organizations, the Click2Enter-I solves the problem of mutual aid access and helps assure officer safety during law-enforcement stealth operations. The Click2Enter-I also has a proven track record in the operation of roll-up doors for law enforcement sally-ports and municipal parking garage roll-up door access control.

Since its U.S. launch in 2000, Click2Enter-I has proven reliable, fast, simple, secure, and tested. It is increasingly being mandated for security access installations by a growing number of fire, police, state, county and local government agencies. C2E also holds European Patent rights for their unique technology in all cooperating Patent Cooperation Treaty (PCT) countries.
